Free Games Directory

Discover & Download Free Games - All in One Place

Platform	Version
Web (React.js)	1.0 - MVP

1. Product Overview

1.1 Executive Summary

Free Games Directory is a lightweight, fast, and visually appealing web platform that helps gamers discover and access free-to-play games from official sources. The platform curates free game listings organized by genre, with detailed game information and direct links to legitimate download sources.

Unlike piracy aggregators or cluttered general search results, Free Games Directory focuses on trust, simplicity, and speed - delivering a dark-themed browsing experience with no registration required, powered by React.js.

1.2 Product Information

Field	Details
Product Name	Free Games Directory
Version	1.0 - MVP
Category	Web Development
Product Type	Game Discovery Web Platform (React SPA)
Industry	Gaming & Entertainment
Platform	Web Browser - Chrome, Firefox, Edge, Safari (latest)
Deployment	Vercel (free tier)
Target Audience	Casual Gamers, Retro Enthusiasts, Students, New Gamers

1.3 Mission & Vision

Mission
To give gamers a single trusted destination to discover and download free, legitimate games - without clutter, piracy risk, or noise.

Vision

To become the go-to first stop for anyone looking for free games from official sources.

1.4 Project Objectives

- Give users a single trusted destination to find free games.
- Make game discovery fast through search and genre filtering.
- Direct users only to official, legitimate download sources - never piracy.
- Deliver a dark-themed gaming experience on any device.
- Keep the platform lightweight with zero backend, database, or accounts.
- Showcase Featured Games on the homepage to spotlight standout titles.

2. Scope of Work

The MVP covers 3 routes and a small set of reusable components. All content is frontend-only, with no backend, server, database, or authentication. Game data is served from a single local JSON file.

#	Section	Type	Priority
1	Navbar	Component - All Pages	Must Have
2	Hero Section	Home Page Section	Must Have
3	Genre Categories	Home Page Section	Must Have
4	Featured Games Grid	Home Page Section	Must Have
5	Footer	Component - All Pages	Must Have
6	Search Bar	Browse Page	Must Have
7	Genre Filter	Browse Page	Must Have
8	Games Grid	Browse Page	Must Have
9	Game Detail Page	Route - /game/:id	Must Have

3. Functional Requirements

3.1 Navbar

- Display provided logo and site name.
- Navigation links: Home, Browse Games.
- Responsive with a hamburger menu on viewports below 768px.

3.2 Hero Section (Home)

- Primary heading: "Discover & Download Free Games".
- Primary CTA button "Browse Games" that navigates to /browse.

3.3 Genre Categories (Home)

- Clickable genre buttons: Action, Puzzle, RPG, Arcade, Adventure, Strategy.
- Each genre button navigates to /browse with that genre pre-applied as a filter.

3.4 Featured Games (Home)

- Grid of exactly 6 games marked featured: true in the data file.
- Each card displays: screenshot, title, genre badge, platform tag, and "View Game" button.
- "View Game" navigates to /game/:id.

3.5 Footer

- Display website name and copyright text.
- Navigation links: Home, Browse Games.

3.6 Browse Page - Search Bar

- Text input labelled "Search games...".
- Filters the games grid in real time as the user types.
- Matches against game title only.
- Fully client-side - no network requests.

3.7 Browse Page - Genre Filter

- Genre filter buttons: All, Action, Puzzle, RPG, Arcade, Adventure, Strategy.
- "All" is the default and shows every game.
- Clicking a genre shows only games of that genre.
- Active filter button is visually distinguished from inactive ones.

3.8 Browse Page - Games Grid

- Displays all games by default in a card grid layout.
- Search and genre filters apply simultaneously when both are active.
- Grid layout: 4 columns desktop, 2 columns tablet, 1 column mobile.
- Displays "No games found" message when no games match the active filters.

3.9 Game Detail Page (/game/:id)

- "← Back to Browse" button at the top, navigating back to /browse.
- Bold game title heading.
- Screenshot image, genre badge, and platform tag.
- Full game description (2-3 paragraphs).
- "Download Free" button - opens the official download URL in a new tab.

- Download links must never point to unofficial or piracy sources.

4. Data Architecture

All platform content is served from a single local JSON file. No external API calls, backend, or database is used.

4.1 Game Data Structure

Required Fields per Game Entry														
id		title		genre		platform		description		imageUrl		downloadUrl		featured

4.2 JSON File Structure

File	Contents
src/data/games.json	All 10+ game entries with full metadata; at least 6 marked featured: true

4.3 Data Rules

The developer is responsible for creating and populating the games.json.

- Minimum of 10 games populated in games.json on delivery.
- At least 6 of the 10 must have featured: true.
- All image URLs must be publicly accessible without authentication.
- All download URLs must link to official, free, legitimate sources only.
- Broken images must fall back to a placeholder image.

5. Technical Requirements

Requirement	Specification
Framework	React.js (functional components + hooks)
Language	JavaScript ES6+
Styling	Tailwind CSS
Routing	React Router DOM v6
Data	Static local JSON file - no external API calls
Storage	None - no local storage, accounts, or sessions
Version Control	GitHub - public repository
Deployment	Vercel (free tier)

Browser Support	Chrome, Edge, Firefox, Safari - latest versions
-----------------	---

5.1 Breakpoints

Breakpoint	Viewport Width	Grid Columns
Mobile	480px	1 column, hamburger menu
Tablet	768px	2 columns, full navbar
Desktop	1200px+	4 columns, full navbar

5.2 Not Allowed

- Backend servers, databases, or authentication systems.
- Paid UI libraries or premium plugins.
- Hardcoded game data inside components - all content must come from games.json.
- User accounts, reviews, ratings, or comments.
- Links to unofficial, pirated, or unverified download sources.
- Direct copying of layouts from Steam, Epic Games Store, IGN, or similar platforms.

6. Design Requirements

6.1 Visual Theme

Theme	Dark Gaming
UI Style	Clean, Responsive, Gaming-Focused

6.2 Color Palette

Purpose	Color Name	Hex
Background	Dark Gray	#111111
Card Background	Charcoal	#1e1e1e
Primary Accent	Bright Green	#00ff88
Text Primary	White	#####
Text Secondary	Light Gray	#####
Borders / dividers	Dark Gray	#2a2a2a

6.3 Genre Badge Colors

Genre	Color	Background Hex	Text Hex
Action	Red	#ef4444	#4a1313

Puzzle	Blue	#3b82f6	#0c2c53
RPG	Purple	#8b5cf6	#26215c
Arcade	Yellow	#eab308	#412402
Adventure	Green	#22c55e	#173404
Strategy	Orange	#f97316	#4a1b0c

Badges are small, rounded (pill shape), semi-bold text, uppercase, font-size 11-12px.

6.4 Typography

Usage	Style
Headings	Bold, sans-serif (Inter or system font)
Body Text	Regular weight, light gray on dark background
Buttons	Bold, uppercase, letter-spacing ~0.5px
Genre Badges	11-12px, rounded, semi-bold, uppercase

6.5 Design Direction

Do:

- Dark backgrounds throughout - no light or white backgrounds on any page.
- Card-based layouts with subtle hover effects (scale or border highlight).
- Bold sans-serif headings, light gray body text.
- Maximum content width of 1200px, centered on all pages.

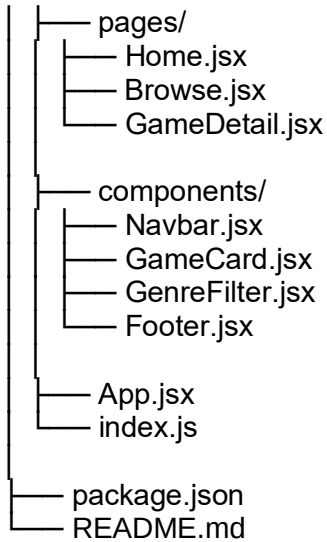

Do Not:

- Use gradients or glow effects.
- Use white or light backgrounds on any page.
- Link to piracy, unofficial mirrors, or unverified sources.

7. Project Structure

Folder Structure

```
free-games-directory/  
├── public/  
│   └── index.html  
├── src/  
│   ├── data/  
│   └── games.json
```

8. Reference Materials

8.1 Reference Image

A reference image of logo is provided for use in the website branding.

Developer Responsibilities:

- Integrate the logo into the Navbar
- Generate favicon assets from the approved logo
- Ensure logo displays correctly across desktop and mobile layouts

9. Deliverables

#	Deliverable	Format	Notes
1	Complete React Application	Source Code / GitHub Repo	Organized structure, commented code
2	Live Deployment	Vercel URL	Publicly accessible, error-free
3	GitHub Repository	Public Repo URL	Clean commit history

4	Game Data File	games.json	10+ complete game entries, 6+ featured
5	Project Documentation	README.md	Setup guide + how to add new games

10. Out of Scope - Future Expansion

The following features are planned for future versions and are explicitly excluded from the MVP build:

- User accounts and saved game lists.
- User-submitted game suggestions (with moderation).
- Admin dashboard for managing game listings.
- Game ratings and reviews.
- Advanced search filters (year, platform, file size).
- Dark/light mode toggle.
- Newsletter or update notifications.

11. Quality Assurance Checklist

The delivery is considered complete only when all items below pass:

11.1 Functional Checks

1. Live URL is publicly accessible and loads without errors.
2. All 3 routes (/ , /browse , /game/:id) render correctly.
3. Home page displays exactly 6 featured game cards.
4. Search bar on Browse page filters games in real time by title.
5. Genre filter buttons filter games correctly; "All" resets the filter.
6. "No games found" message appears when no results match.
7. Game Detail page displays title, image, genre, platform, description, and download button.
8. Download button opens the official URL in a new browser tab.
9. "← Back to Browse" button navigates back to /browse.
10. No broken images are displayed on any page.
11. Genre buttons on the Home page navigate to /browse with the correct genre pre-filtered.

11.2 Design & Responsiveness

12. Layout is fully responsive at 480px, 768px, and 1200px+.
13. Color palette matches the approved hex codes throughout.
14. No white or light backgrounds on any page.
15. Hover effects limited to subtle scale or border highlight.

11.3 Code & Delivery

16. All game data loaded from games.json - nothing hardcoded in components.
17. games.json contains at least 10 fully populated entries, 6+ featured.
18. No console errors in any browser on any page.
19. GitHub repository is public.
20. Vercel deployment URL is live, publicly accessible, and error-free.
21. README.md explains setup, run instructions, and how to add a new game.
22. Folder structure matches the specification in Section 7.

12. Success Criteria

The completed Free Games Directory should feel like a fast, game discovery website - dark-themed, real-time filtering, and clear navigation across all device sizes.

A visitor to the site should be able to:

- Browse free games by genre and discover featured titles.
- Search for a specific game by title with instant results.
- Read full game details before deciding to download.
- Click "Download Free" and land on an official, legitimate source in a new tab.
- Use the site comfortably on mobile, tablet, and desktop without registration.

The experience should confidently provide a trusted destination for free game discovery - without broken layouts, console errors, or placeholder states on any page or device.
